1. The committee elects Cam McLeman as committee chair and delegate to the technology fee committee. Elena Greer replaces Ryan Weir as student representative to the technology committee.

2. Currículum: The committee was asked to review the software proposal Currículum, expanding the current Acalog system, and to consider its deployment. We recommend the incorporation of currículum into our system, as well as a deployment which occurs gradually, mirroring that of the Drupal deployment last year.

3. Banner/DegreeWorks: By request of Senior Vice Provost Vahid Lofti, the committee sends delegates (Cam McLeman and Richard Richardson) to a presentation from Ellucian on DegreeWorks, a proposed software addition replacing the existing Banner CAPP module. The committee approves going forward with the replacement.

4. LAN Passwords: The committee approved a proposal from ITS to address some issues with password security. The new proposal would have passwords of 15 characters or longer with a minimum enforced setting of 11 characters. Adopting this would allow the reduction of the interval for required password changes should be lengthened from the current 3 months to once per year. In addition, the new protocol will allow a larger number of incorrect password entries before locking out the account, alleviating the strain on ITS staff in handing these occurrences.

5. The committee hears a student request to remove graduate students from the UMF_STUDENTS email list. Given the option to easily unsubscribe from the list, we decide to take no action.

6. The committee agrees to clarify language governing the Happenings list, so as to more explicitly forbid course offerings, reserved instead only for one-time special events.
